The hPXR is used to identify: its specific modulators, and compounds that induce CYP3A4 expression (i.e. to identify drug interactions, since CYP3A4 is involved in many biotransformations of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               drugs). The modulators are potentially useful for: associating particular diseases and conditions with PXR and for treating such conditions. Antibodies raised against hPXR can be used for determination and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         of various diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence represents a human intranuclear receptor protein. The nucleic acid sequence was ison ated from a human adult cDNA library using a swellfish ANCO3 derived probe. The protein can be used for the development of drugs and diagnosis and treatment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Disclosure;

The protein can be used for the development of drugs and diagnosis and treatment of various diseases.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention describes the isolation of the novel human nuclear receptors nNR7 or nNR7-1. The nNR7 and nNR7-1 proteins are useful in the identification of dewnstream target genes and ligands regulating its activity. The nuclear receptor is involved in the regulation of in vivolent proliferation and/or cell development. The nNR7 and nNR7-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 1; Fig 3; 80pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       400
                                                                                                                                                                                                                                                                        he present sequence represents a human intranuclear receptor prime nucleic acid sequence was isolated from a human adult cDNA library using a swellfish ANO23 derived probe. The protein can be used for the development of drugs and diagnosis and treatment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   361

The nucleic acid sequence was isolated from a human adult cDNA library using a swellfish ANO23 derived probe. The protein can be used for the development of drugs and diagnosis and treatment.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               be used for treating metabolic, proliferative or inflammatory conditions, by introducing them into a mammal. The introduced nucleic acid is then capable of transforming a cell in vivo and then polypeptide is expressed. A substance affecting VDRR signal transduction, such as an agonist or antagonist can be used for the manufacture of a medicament for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               N.B. The specification specifically claims the VDRR nucleic acid and polypeptide sequences given in figures 1, 4, 7 and 8, but no figures
                                                                                                                                                                                      Human: vitamin D receptor related protein; VDRK; obesity; diabetes:
autorexia; rheumatoid arthritis; lipoprotein defect; hyperlipidaemia;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           malign tumours, hyperproliferative skin disorders or hyperthyroidism. Nucleic acid vectors encoding for expression of a VDRR polypeptide can be used for treating metabolic, proliferative or inflammatory conditions, by introducing them into a mammal. The introduced nucleic acid is then by introducing them into a mammal. The introduced nucleic acid is then capable of transforming a cell in vivo and then polypeptide is expressed. A substance affecting VDRR signal transduction, such as an agonist or antagonist can be used for the manufacture of a medicament for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       metabolic, proliferative or inflammatory condition. N.B. The specification specifically claims the VDRR nucleic acid and polypeptide sequences given in figures 1, 4, 7 and 8, but no figures are given in the specification.

RESULT 11
AAY21799
steroids particularly phytoestrogens or calcium channel blockers, to reduce steroid toxicity in subjects being treated with steroids, e.a. it cases of tuberoulosis (treated with rifampin and related compounds) breast cancer (treated with tamoxifen, raloxifen etc.) or osteoporosis (treated with Vitamin K), or to slow metabolism of theraponic steroids. Also, modulating endogenous SXR is used to treat disease, particularly an agonist is used where endogenous steroid levels are excessive (e.a.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              steroids, and thus affects metabolism. SXR is a broad specificity, low-affinity receptor for reducing excessive levels of steroids in the circulation. (Ant)agonists of SXR are used to regulate metabolism of
                                                                                                                                                               Cells that express SXR are used to identify compounds likely to be
                                                                                                                                                                                                Cushing syndrome; virilism and hirsutism in women; polycystic ovarian disease; Il beta-, I?- or 21-hydroxlase deficiency; 3 beta-hydroxysteroid debydrogenase deficiency, or breast, colorectal or prostatic cancer), while antagonists are used where endogenous storoid levels are too low.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      genes, in response to a wide variety of natural and synthetic steroid hormones and (1v) is prominently expressed in liver and intestine. SXR regulates expression of catabolic enzymes, in response to many difference to the contract of the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a novel nuclear receptor polypoptide, designate SXR (steroid and xemobiotic receptor). SXR (i) forms a hoter-dimer with rethooid X receptor (RXR), (ii) binds to a direct or inverted repeat response element motif based on the half-site AGTTCA, (iii) activates
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New steroid and xenobiotic receptor, used to identify modulators controlling metabolism of steroids and xenobiotics, e.g. reducing
